Math Outreach: local, global and interconnected

Wednesday, April 13, 2022, 3-4pm in Fenton 105

Everyone is welcome to attend!

The University of Oregon has a long history of math outreach in the community. In this presentation, I will talk about the outreach projects I'm involved with in Seattle, and then turn the mic to the audience to learn about their experiences, thoughts, and ideas for the future, turning this talk into a lively discussion. The goal is to inspire members of the mathematical community to become engaged in mathematical outreach programs for young students. I am also interested in discussing online initiatives which – naturally - expanded significantly during the pandemic and now are benefiting some of the displaced children from Ukraine.
